

lymphocyte activation leukocyte migration T cell costimulation signaling receptor binding phosphorus metabolic process
extrinsic component of membrane
protein binding, bridging
extrinsic component of plasma membrane immune system process lymphocyte costimulation
movement of cell or subcellular component regulation of immune system process cell migration
molecular adaptor activity
regulation of signaling
cell surface receptor signaling pathway
immune response-regulating cell surface receptor signaling pathway involved in phagocytosis
immune response-activating signal transduction
regulation of cell adhesion protein kinase activity intracellular signal transduction cell motility
phosphatidylinositol 3-kinase complex
kinase regulator activity insulin receptor binding
phosphoprotein binding
regulation of response to stimulus activation of immune response platelet activation
immune response-regulating signaling pathway locomotion transferase activity, transferring phosphorus-containing groups
